

# Integrating Teamchat with Pingdom

- Teamchat allows user to get pings of their selected URL's by just signing in once and then using the keyword “ping” everytime they require the status of their URL

The keyword "help" introduces the user to the Pingdom bot and the list of keyword he can use. The next step of the first time user is to login and get the application key once from respective pingdom ID

You can use me to check the status of your website, using following keywords:

- **ping** - Type this command to Check the status for your website added in your pingdom account.
- **addcheck** - Type this command to create any check i.e to add any website in your pingdom account.
- **deletecheck** - Type this command to delete any check i.e to delete any website in your pingdom account.
- **login** - Type this command if you are logging for the first time from this room or you want to log in from other account.
- **logout** - Type this command to log out from your existing account.

### Host Details 1:

- Name- g
- Hostname- [www.google.com](http://www.google.com)
- Status - up
- Last Response Time - 85 ms
- Type - http

The keyword ping generates a form in which user needs to select the URL's he wants to check for this time. Once the URL's are selected the status of all the selected URL's will be listed along with the response time

Addcheck keyword creates a form where user has to fill in the details of URL's he wants to keep check on and then check is generated.

Next time he pings this URL is also listed
